

Natural Technology

We want to contribute to a better environment through natural technology. Products from Prebona will provide durable material with longer and better life. The best solution for ecology and economy is to preserve and maintain instead of wear and tear. This is true from textiles to concrete. We develop materials that require a minimum of maintenance without chemicals. We find this exciting!

WE WOULD LIKE TO PRESERVE WITHOUT MAINTENANCE AND CHEMICALS. THIS IS GOOD FOR THE ENVIRONMENT AND THE ECONOMY.

PRODUCTS FROM PREBONA MAKES THE MATERIAL DURABLE, DIRT-REPELLENT, ODOR-FREE AND HYGIENIC.

SILICA AND WATER – SIMPLE, COST EFFECTIVE AND NATURAL

Natural silica is perfect for increasing the life span for many materials in an environmentally and cost-effective way. Silica is the most common substance in the Earth's crust and is proving its durable properties in natural materials like sand, stone, glass and ceramics. Silica is strong and incredibly resistant to heat, sunlight and wear.

Prebona has developed and patented a simple way to adapt the unique properties of silica to extend the life of surfaces and constructions from concrete, plastering, wood, textiles etc. in an environmentally and cost-effective way. The Prebona products consist of silica and water – simple, cost-effective and natural!
